process across multiple
devices

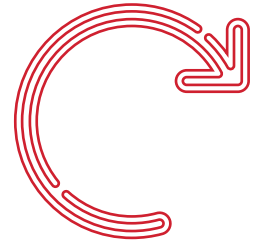

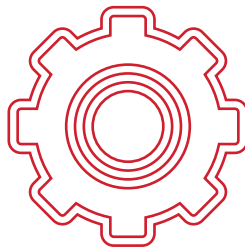

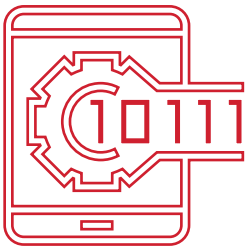

IMAGING AND DEPLOYMENT

ZERO TOUCH

AUTOMATED

FUTURE-PROOF

Deploy or update operating systems using
the latest technologies and best practices.

Multi-platform Ready

macOS

 Windows

 chrome

 android

iOS

AUTOMATED **Simplify and shorten deployment processes**

Imaging is a complex and time-consuming process, even on a single operating system. FileWave simplifies and shortens the process through a variety of automation tools adapted to multiple operating systems. FileWave Lightning, our local imaging tool, easily clones older macOS devices; Network Imaging deploys images and updates to Windows computers across the network; and scripted installations using Filesets enables you to fully deploy macOS High Sierra devices.

ZERO TOUCH **Deployment with no hands-on by IT**

Imaging is changing. Apple DEP takes the operating system out of your environment. Instead, you now manage the process between users, your organization, and the Apple ecosystem. Using FileWave to manage DEP, now you can have completely zero-touch deployments of macOS and iOS devices. The base operating systems and preferences will be configured as part of the user's out-of-box experience. Hand out devices still in their shrinkwrap, and have confidence that they will be properly managed and compliant with company standards immediately. And with FileWave Smart Groups, applications are pushed down to the users who need them - Mac, Windows, and mobile.

FUTURE-PROOF **We update to the latest processes, so you don't have to**

With every hardware refresh and innovations happening across all manufacturers, it's important to future-proof your management. FileWave supports the latest technologies, such as DEP, but also has your legacy devices covered. As platform functionality shifts with industry best practices, FileWave will future-proof your processes - so you don't have to change how you work.

Highlighted Features

DEP SUPPORT

Automate the OS deployment and update across macOS and iOS devices leveraging Apple's DEP protocols.

NETWORK IMAGING

In-place updating of an image to ensure the latest Windows version (or older macOS version) is applied without negative impact on network capacities. Create custom image sets in our easy drag and drop interface.

FILESETS

FileWave's patented payload for delivering apps, content, and configurations

MULTI-PLATFORM MANAGEMENT

Whether local or remote, Windows, Chrome, macOS, or iOS, FileWave makes it easy to deploy an OS, patch, or application across the network.

Not all features and capabilities are supported on all operating systems
